# tehnički opis

## technical description

# ALD 9100

Sistem ALD 9100 predstavlja konstrukciju aluminijumskih profila sa termo prekidom koji čine poliamidne trake širine 34 mm i sa enterijerskom oblogom od profila izrađenih od punog tvrdog drveta.

Svoju široku primenu je obezbedio zahvaljujući svojim tehničkim i termičkim karakteristikama.

Sa koeficijentom prolaza toplove, za ram  $U_f=1,6 \text{ W/m}^2\text{K}$  i za prozor  $U_w=1.2 \text{ W/m}^2\text{K}$ , ( sa ispunom od troslojnog termoizolacionog stakla sa koeficijentom prolaza toplove  $U_g= 0.7 \text{ W/m}^2\text{K}$  ), ovaj sistem spada u sam vrh ponude termoizolovanih konstruktivnih sistema, što je doprinelo njegovoj primeni na svim objektima gde su pored ostalih mehaničkih i drugih karakteristika dominantan uslov bila i termička svojstva aluminijumskog sistema.

## MOGUĆNOST PRIMENE:

- Ovaj sistem aluminijumskih profila sa termičkim prekidom, okovom u sistemu „EURONUT“ 12/18-9. I EPDM dihtung zaptivkama najnovije generacije, omogućava izradu:
  - bilo kog tipa prozora;
  - balkonskih vrta;
  - kliznih i sklapajućih vrata sa jednim ili više krila;
  - portala i drugih fasadnih pregrada.

Aluminijumski profili su sa ravnim ivicama, modernog dizajna.

*System ALD 9100 TopTherm is system with thermal bridge accomplished through implementation of 34 mm wide polyamide bars and with interior cladding crafted from full hardwood.*

*System found wide utilization due to its technical and thermal characteristic.*

*With a thermal conductivity coefficient for frame  $U_f=1,6 \text{ W/m}^2\text{K}$ ,  
for window  $U_w=1.2 \text{ W/m}^2\text{K}$ ,  
(along with a three-layer thermo insulated glass with a thermal conductivity coefficient  $U_g= 0.7 \text{ W/m}^2\text{K}$ ) this system is ranked amongst the best on the market, which contributed to its appliance to the projects where besides mechanical and other characteristics dominant requirement was thermal characteristics of the system.*

## IMPLEMENTATION POSSIBILITIES:

*This system of aluminum profiles, with thermal bridge, with <>Euro-groove>> fittings 12/18-9 and E.P.D.M. gaskets, is ready to manage any of the following type of construction:*

- any type of window;
- balcony doors;
- slide and fold doors (with one or more sashes);
- portals, and other facade partitions.

*Aluminum profiles are with flat edges and modern design.*

# ALD 9100

## TEHNIČKI OPIS SISTEMA:

- Presovani aluminijumski profili od legure AlMgSi0,5 maksimalne prekidne čvrstoće F22 (stanje 91).
- Debljina profila i tolerancije: prema standardu JUS. C.C3.220, odnosno DIN 1748/4
- Poliamidne trake: debljine 34 mm proizvedene od visokokvalitetnog atestiranog poliamida PA66 GF 25.
- Debljina ispune/stakla: Različite, od 23 do 48 mm u zavisnosti od vrste upotrebljenih kit lajsni.
- Termo ispuna prostora (komora) ovičenih poliamidnim trakama i prostora oko termo stakla vrši se penastim termoizolacionim materijalom.
- Centralna guma je od dvokomponentnog E.P.D.M.-a. Kompaktni deo profila vezuje se za aluminijumski profil, a mikroporozni služi kao termo ispuna.

## GLAVNE KARAKTERISTIKE:

Aluminijumski profili ovog sistema poseduju termički prekid sa tri komore koje se formiraju bilo odgovarajućim EPDM zaptivkama bilo poliamidnim trakama, koji obezbeđuju koeficijent prolaza toplote kroz ram  $U_f=1,6 \text{ W/m}^2\text{K}$  i koeficijent prolaska toplote za prozor dimenzija  $1230 \times 1480 \text{ mm}$   $U_w=1,2 \text{ W/m}^2\text{K}$  uz staklo sa koeficijentom  $U_g=0,7 \text{ W/m}^2\text{K}$ .

Zvučna izolacija sklopa aluminijumskih profila sa EPDM zaptivkama je  $34 \text{ dB}$ , dok se zvučna izolacija kompletne pozicije definiše u zavisnosti od izbora odgovarajućeg stakla, odnosno ispune.

Spajanje ramova na uglovima moguće je na dva načina: pomoću komada ugaone uloške od presovanog aluminijumskog profila fiksirane utiskivanjem i ekspandirajućim lepkom, ili uz pomoć dvodelne ugaone uloške koja spaja profile razupiranjem.

## TECHNICAL CHARACTERISTICS OF THE SYSTEM:

- Pressed aluminum profiles from the AlMgSi0.5 alloy, with ultimate tensile strength F22 (state 91).
- Thickness of the profile and tolerance: according to JUS. C.C3.220, or DIN 1748/4
- Polyamide bars 34 mm wide, made of a high quality attested polyamide PA66 GF 25
- Thickness of the filling/glass: vary, from 23 – 48 mm depending on glazing bad used.
- Thermo filling of chambers among polyamide bars and around glass is done with foamy thermo insulating material.
- Central gasket is made of two components where compact part is attached to an Al. profile and micro porous part is used as thermo filling.

## MAIN CHARACTERISTICS OF THE SYSTEM:

Aluminum profiles of this system are with thermal break with 3 chambers, formed either by implementation of proper E.P.D.M. gaskets, or with polyamide bars, with a resulting thermal coefficient for frame  $U_f=1,6 \text{ W/m}^2\text{K}$ , for window  $1230 \times 1480 \text{ U}_w=1,2 \text{ W/m}^2\text{K}$  along with a glass with a thermal conductivity coefficient  $U_g=0,7 \text{ W/m}^2\text{K}$ .

Soundproofing of the system of aluminum profiles along with E.P.D.M. gaskets is  $34 \text{ dB}$ , while the definitive soundproofing is defined with a choice of appropriate glass or other replenishment.

Coupling of frames on corners is possible either with a piece of corner joint from pressed Al. profile embedded and glued, or with a split corner joint which connects profiles by means of strut.

# ALD 9100

## POVRŠINSKA OBRADA:

Zaštita i završna obrada površine aluminijumskih profila vrši se bilo postupkom anodne oksidacije – eloksaže, bilo postupkom elektrostatičkog bojenja – lakovanjem.

*NISSAL NEWMET* vrši završnu obradu svojih profila užpuno poštovanje evropskih standarda (QUALANOD za eloksažu i QUALICOAT za plastifikaciju).

Eloksaža u *NISSAL NEWMET*-u obavlja se sa potpuno obnovljenom i modernizovanom opremom kapaciteta 24.000A.

Eloksaža se vrši prema *EUROCOLOR* ton karti, počevši od prirodne boje aluminijuma, preko svetle bronze, srednje bronze i tamne bronze do crne i zlatne.

Anodni sloj je debljine 20 mikrona. Boja eloksaže može biti različita počev od prirodne boje aluminijuma, preko svelte bronze, do žute i crne. Sloj poliesterskog praha ima debljinu od 60 do 80 mikrona na glavnim, vidljivim delovima profila. Sve boje RAL ton karte su dostupne.

## SURFACE PROTECTION:

*Surface protection is carried out whether with process of anodizing or with process of powder coating.*

*Both processes are carried out in compliance with strict European standards of "QUALANOD" for anodizing and "QUALICOAT" for powder coating.*

*Anodizing at NISSAL NEWMET is carried out, with a completely reconstructed and modernized equipment of 24.000A capacity.*

*Anodizing is carried out according to EUROCOLOR hue card starting with natural color of aluminum, through light bronze, medium bronze and dark bronze, to black and gold.*

*The thickness of anodic layer is 20 microns, which is necessary for outdoor application of aluminum profiles in civil engineering.*

*Polyester powder coating layer is 60 – 80 microns thick on the main, visible parts of the profiles.*

*All colors from RAL hue card are available.*

# ALD 9100

## DRVENI PROFILI:

Služe kao enterijerska obloga termoizolovanih aluminijumskih profila.

Drveni profile su ravnih ivica , čistih formi I u izgledu pozicije dominira jedan profil kao ram stakla. Kit lajsna je „utopljena“ u dimenziju vidnog rama i kod otvarajućeg krila montira se zajedno sa oblogom.

Vezivanje drvenih za aluminijumske profile izvodi se preko poliamidnih elemenata .Ova veza omogućava nezavisno formiranje ramova od aluminijuma i drveta.Specijalno oblikovani EPDM profili izoluju drvene od aluminijumskih profila.

Drveni profili se proizvode od probranog prvakasnog drveta

(hrast, parena bukva, jasen, trešnja, mahagoni)

Širina drvenih profila je 16 do 18 mm.  
Bojenje drveta sa ili bez predhodnog toniranja vrši se poliuretanskim lakom u tri sloja u komori za lakiranje.

## KVALITET:

Kvalitet svih NISSAL NEWMET-ovih proizvoda je garantovan striktno propisanim proizvodnim procedurama – od presovanja aluminijumskih profila i poštovanja odgovarajućih dimenzija i tolerancija u skladu sa JUS C.C3.220, odnosno DIN 1748/4, preko procesa eloksiranja ili plastificiranja aluminijumskih profila u skladu sa evropskim QUALICOAT i QUALANOD standardima, pa do nabavke i ugradnje svih pratećih materijala (spojnica, EPDM zaptivki itd.) i okova od renomiranih evropskih proizvođača.

Kompletan proces, odnosno svaki segment, proizvodnje se pažljivo i detaljno prati i kontroliše, a kvalitet kompletног procesa potvrđen je i znakom kvaliteta po standardu ISO 9001.

Proizvodjač zadržava pravo vršenja konstruktivnih izmena bez prethodne najave.

## WOODEN PROFILES:

*Are used as an interior covers of the thermo-insulated Al. profiles.*

*Profiles are with flat edges, clean form and with one dominant profile posing as glass frame. Glazing bead is sunk within visible frame and on sash it is mounted along with the wooden cover.*

*Bonding of aluminum with wooden profiles is done through polyamide elements, while a specially designed EPDM profile provides thermal barrier among these profiles.*

*Wooden profiles are exclusively produced from first class hard wood (oak, steamed beech, ash, cherry tree, mahagony).*

*Width of wooden profiles vary from 16 -18 mm  
Painting of these profiles is done with polyurethane lacquer in 3 layers, with or without previous toning in a varnishing chamber.*

## QUALITY:

*All NISSAL NEWMET's products have a quality which is guaranteed through strictly determined procedures – from aluminum profiles extrusion in accordance with JUS C.C3.220 and DIN 1748/4 standard, through the process of anodization and electrostatic powder coating in accordance with European "QULANOD" and "QUALICOAT" standards, to supply of all accessories (corner joints, EPDM gaskets, fittings, etc.) from prominent European suppliers.*

*Complete process and every segment of production is carefully and in detail supervised and controlled, and the quality of complete process is validated with the sign of quality standard ISO 9001.*
